

## Step therapy – Select

Utilization management updates  
July 1, 2023

Most medical conditions have many medication options. Although their clinical effectiveness may be the same, the costs can be very different. The step therapy program gives you the treatment you need, usually at a lower cost.

**This is a list of medications that have been added to the step therapy program.**

### **Here's how it works:**

With this program, you must try a step 1 medication first, before a step 2 medication may be covered. When you bring a prescription to your pharmacy, our system will check the medication for step therapy requirements. If your pharmacy claims show you have tried a step 1 medication in the recent past, the step 2 medication may be filled. If not, the pharmacist will contact your doctor to explain next steps.

If you see your medication listed, we encourage you to talk with your doctor about your treatment and medication options. If you have questions about the step therapy program, call the phone number on your member ID card.

## Step therapy medications

The following medications have been added to a step therapy program. This means you must try a lower-cost medication (step 1) before a higher-cost medication (step 2) is covered.
